

# Vibe coding brief

Fill this in before opening Terminal. If you can't answer all six questions, the tool isn't ready to build yet.

Vibe coding design brief  
v1.0

## TOOL NAME

Longhand

## OWNER

Susanne Krogh

## DATE

10 May 2026

## VERSION

0.1

## CORE — WHAT AND WHY

### PROBLEM

#### What job does this tool do?

One sentence. If it takes two, the scope is too wide.

Gives me a fast, private way to turn captured material — handwritten notebook pages and voice recordings — into markdown I can use as raw material

### USER OUTCOME

#### What changes for the person using it?

Not what it does — what it makes possible.

I can take whatever I've captured (a notebook page, a walking voice memo, a session recording) and have it as longhand text in minutes, ready to draft

## USERS — WHO AND WHEN

### USERS

#### Who uses this, and when?

Be specific. "Facilitators during a live session" beats "the team."

Just me. Three scenarios — photographing notebook pages after a thinking session, walking voice memos that become Unruled Play raw material, work sessions I've captured on my

### CONTEXT OF USE

#### What device, environment, pressure level?

A phone in a noisy room needs different decisions than a desktop at a desk.

Mac, dock icon, drag-and-drop. At least weekly across all three input types.

## GOVERNANCE — OWNERSHIP AND LIFESPAN

### BUILD VS BUY

Does something 80% as good already exist?

### SUNSET CONDITION

When does this tool retire?

### OWNER

Who maintains this when it breaks?

If yes — stop here and use it instead.

Notebook → markdown was already custom because no off-the-shelf tool handled my handwriting + diagram mix. Voice → markdown could be done by MacWhisper or similar, but combining both in one tool means one place to maintain, no app-switching, no per-minute cost on my volume, and a

A date, a trigger, or a replacement condition.

Conservative — retire only when both halves can be replaced. macOS adds native local audio transcription AND something off-the-shelf handles the notebook +

One named person. No owner — don't build it.

Susanne Krogh-Hansen

#### THE GATE QUESTION

#### If this tool disappeared tomorrow, would anyone notice?

If the honest answer is "probably not" — reconsider whether it needs to be built, or whether it needs to be more useful before it gets built.

Yes, me. Notebook side already used regularly; voice will be used weekly for Unruled Play and confidential work content.

Keep this file in your repo alongside the tool it describes.
